Research Title	: <u><i>Effect of pegylated interferon on non-responders and relapsers with interferon</i></u> <u><i>Effect of pegylated interferon on non-responders and relapsers with interferon</i></u>
Description	: ABSTRACT. Objective. To assess whether a combination of pegylated interferon (interferon alpha conjugated with polyethylene glycol) and ribavirin can improve the response rate in patients with chronic hepatitis C who either did not respond to (Non-responders), or had relapsed after responding to (Relapsers) standard interferon and ribavirin combination therapy. Patients and methods: In this prospective study, 16 chronic hepatitis C patients (comprising 16 Non-responders and 16 Relapsers) were treated with pegylated Interferon-alpha weekly and ribavirin daily (for one year). Eleven patients had genotype 4, eight were of genotype 1 and one patient had genotypes
